

AI CHATBOT & AUTOMATION DEVELOPMENT

UrbanCart AI Shopping Assistant

An AI-powered customer support & shopping assistant for a Shopify e-commerce store

CLIENT

UrbanCart (Shopify Store)

ROLE

AI Chatbot & Automation Developer

INTERN NAME

Ifrah Mukhtar

Project Overview

UrbanCart is a rapidly growing Shopify-based e-commerce store selling fashion, home accessories, electronics, and lifestyle products internationally. As sales grew, the support team spent hours daily answering repetitive questions about products, shipping, returns, and order status.

The goal: design and build an intelligent AI workflow that supports customers throughout their buying journey, answering FAQs, recommending products, tracking orders, handling returns, and escalating to a human agent when needed.

Uses

Business Challenges

Before automation, the support team faced friction at every stage of the customer journey.

Repetitive Questions

Agents answered the same shipping, return, and product questions over and over.

Slow Response Times

Customers waited long for replies, especially during peak shopping hours.

Scattered Information

Customer data lived across disconnected systems, with no unified record.

Lost Sales Opportunities

Shoppers left without help and without buying when no one responded in time.

Proposed AI Solution

Build an AI-powered chatbot that answers FAQs, recommends products, tracks orders, handles returns, logs every conversation to a CRM, and hands off to a human agent when needed reducing support workload while increasing engagement and conversions.

What This Achieves

Faster Responses

Instant answers, 24/7 no waiting on a support queue.

Lighter Workload

Agents focus on complex issues, not repeated FAQs.

More Conversions

Guided recommendations turn browsers into buyers.

Automation Opportunities

Repetitive tasks handled instantly

Every lead auto-logged to CRM

Appointments/orders scheduled without manual work

Follow-ups stay consistent

System Architecture

Data flows from the storefront through the AI layer to fulfillment, support, and analytics.

The AI Agent (built in n8n) orchestrates every step routing customer intent to the right tool, logging activity to the CRM, and escalating to a human when confidence is low.

Core Features

Six connected modules cover the full customer support journey.

FAQ Automation

Instant answers on shipping, payment, returns & warranty from a live knowledge base.

Product Recommendation

Matches customers to catalog items by category and budget, no invented items.

Order Tracking

Looks up live order status and delivery estimates from Google Sheets.

Return & Refund

Verifies the order, explains policy, and files the request automatically.

Human Handoff

Escalates to a real agent via email when a customer needs extra help.

CRM Integration

Every conversation is logged automatically, no manual data entry.

Technology Stack

Every tool was chosen for reliability on a free tier, with clear reasoning behind each pick.

CHAT INTERFACE

n8n Public Chat Widget

Built-in chat UI, published as a shareable public link , no separate frontend built.

AI MODEL

Groq (Llama 3.3 / 3.1)

Free-tier LLM with reliable tool-calling support.

WORKFLOW AUTOMATION

n8n

No-code orchestration connecting every tool together.

DATABASE & CRM

Google Sheets

Simple, transparent storage for orders and conversation logs.

EMAIL AUTOMATION

Gmail API

Sends return confirmations and human-handoff alerts.

HOSTING & VERSION CONTROL

GitHub

Central repository for code, docs, and diagrams.

Testing & Quality Assurance

Every module was tested against realistic and edge-case prompts before sign-off.

Feature	Test Focus	Result
FAQ	Payment, warranty & delivery accuracy	 Pass
Product Recommendation	No fabricated / out-of-catalog items	 Pass
Order Tracking	Valid & invalid Order IDs	 Pass
Return & Refund	Full flow incl. subjective reasons	 Pass
Human Handoff	Contact info collected before escalation	 Pass
CRM Logging	Auto-logging under multi-tool turns	 Pass (minor gaps)
Language Support	Urdu, Roman Urdu & English	 Pass

Bonus Features & Known Limitations

BONUS FEATURES IMPLEMENTED

- ✔ Multi-language support (responds in any language used)
- ✔ Coupon code generation on qualifying orders
- ✔ AI upselling & cross-selling suggestions
- ✔ Customer sentiment analysis logged per conversation

KNOWN LIMITATIONS

⚠ Free-tier LLM rate limits

Groq's free tier shares a daily token quota, heavy testing can trigger temporary unavailability.

⚠ No live order database

Order data is mocked in Google Sheets; a production version would connect to Shopify's live API.

⚠ Single-channel support

Currently web-chat only; WhatsApp integration is scoped as a future enhancement.

Results & Next Steps

UrbanCart's AI Shopping Assistant now handles the full customer journey from first hello to order tracking to human escalation automatically, accurately, and in the customer's own language.

NEXT STEPS

- ✓ Connect to Shopify's live order API
- ✓ Add WhatsApp & voice channels
- ✓ Expand catalog & upsell logic

Thank you.
